(54) **Method for estimating or simulating parameters of a stratum structure**

(57) The present invention provides for a method for estimating or simulating one or more parameters of a stratum structure, comprising the steps of:

- determining a first model of the stratum structure;
- determining one or more variograms of one or more parameters in one or more of the strata;
- measuring the value of a parameter in a number of points;
- estimating on the basis of a variogram a probability density function (PDF) of the parameter at locations in the strata close to or at some distance from the locations where the parameter has been measured; and
- determining by using seismic data an acceptable value of the parameter at the location where the probability density function of the parameter has been determined using a variogram.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 98 20 0712

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.

26-10-2000
